

Android Installation Guide for 8 & 9 Series DVR

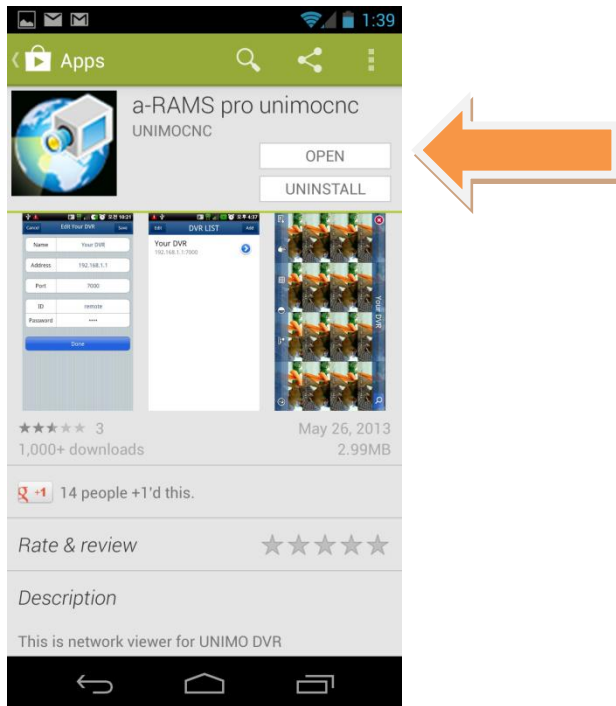

1. Locate Live Play Store On Android

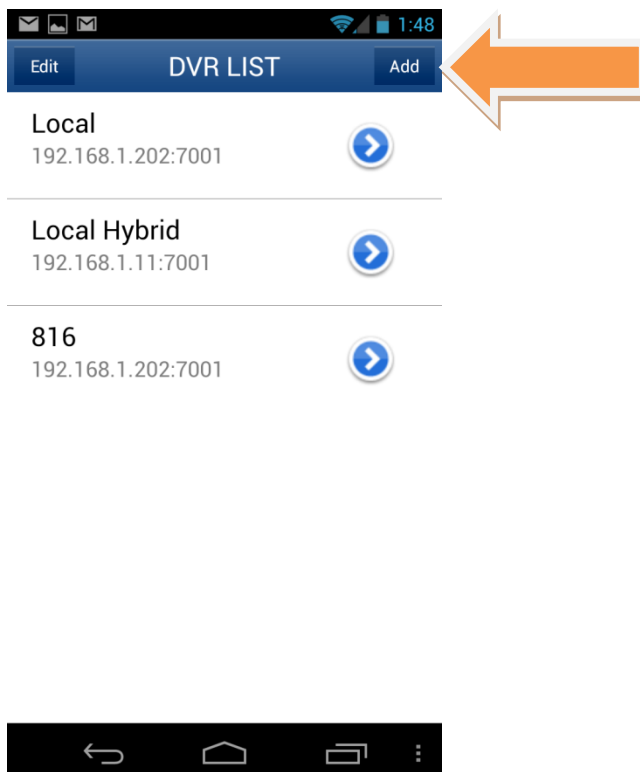

2. Click on the search bar on the top of the screen and search for “a-rams pro”

3. Install “a-rams pro” and open the program

4. Click on “Add list”

5. Fill In The Following Information Then Press “Done”:

The image shows a mobile application interface for adding a new DVR. The app has a status bar at the top with icons for signal, Wi-Fi, and battery, and the time 1:49. The app's header bar is blue with the title "Add new DVR" and buttons for "Cancel" and "Save". The main form consists of five rows, each with a label and an input field:

- Name:** input dvr name
- Address:** input dvr address
- Port:** input port number
- ID:** input login id
- Password:** input password

Below the form is a large blue button labeled "Done".

External input fields with arrows pointing to the app's input fields are shown to the right:

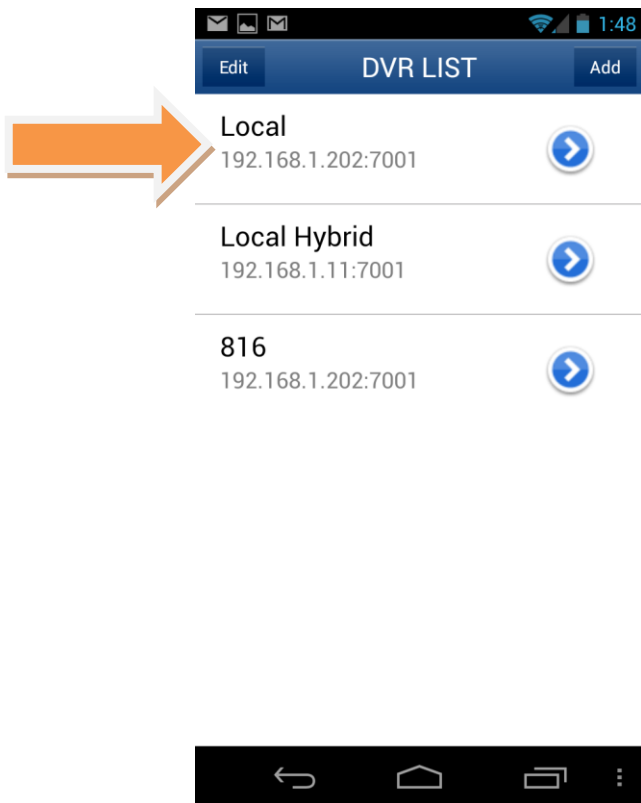

- An arrow points from the text "Jason's Grocery Store" to the Name input field.
- An arrow points from the text "67.89.24.114" to the Address input field.
- An arrow points from the text "100" to the Port input field.
- An arrow points from the text "ADMIN" to the ID input field.
- An arrow points from the text "111111" to the Password input field.

Below these inputs is a large orange arrow pointing left towards the "Done" button.

On the far right, there is a section for DDNS configuration:

- A box labeled "OR" is next to the "Address" input field.
- A box labeled "695e9a.udrdns.net" is next to the "OR" box.
- An arrow points from a box labeled "DDNS NAME" to the "695e9a.udrdns.net" box.

6. Click on the DVR NAME you had just created to connect

All Done !
